

# ANALYTICS 101

# Data Mining

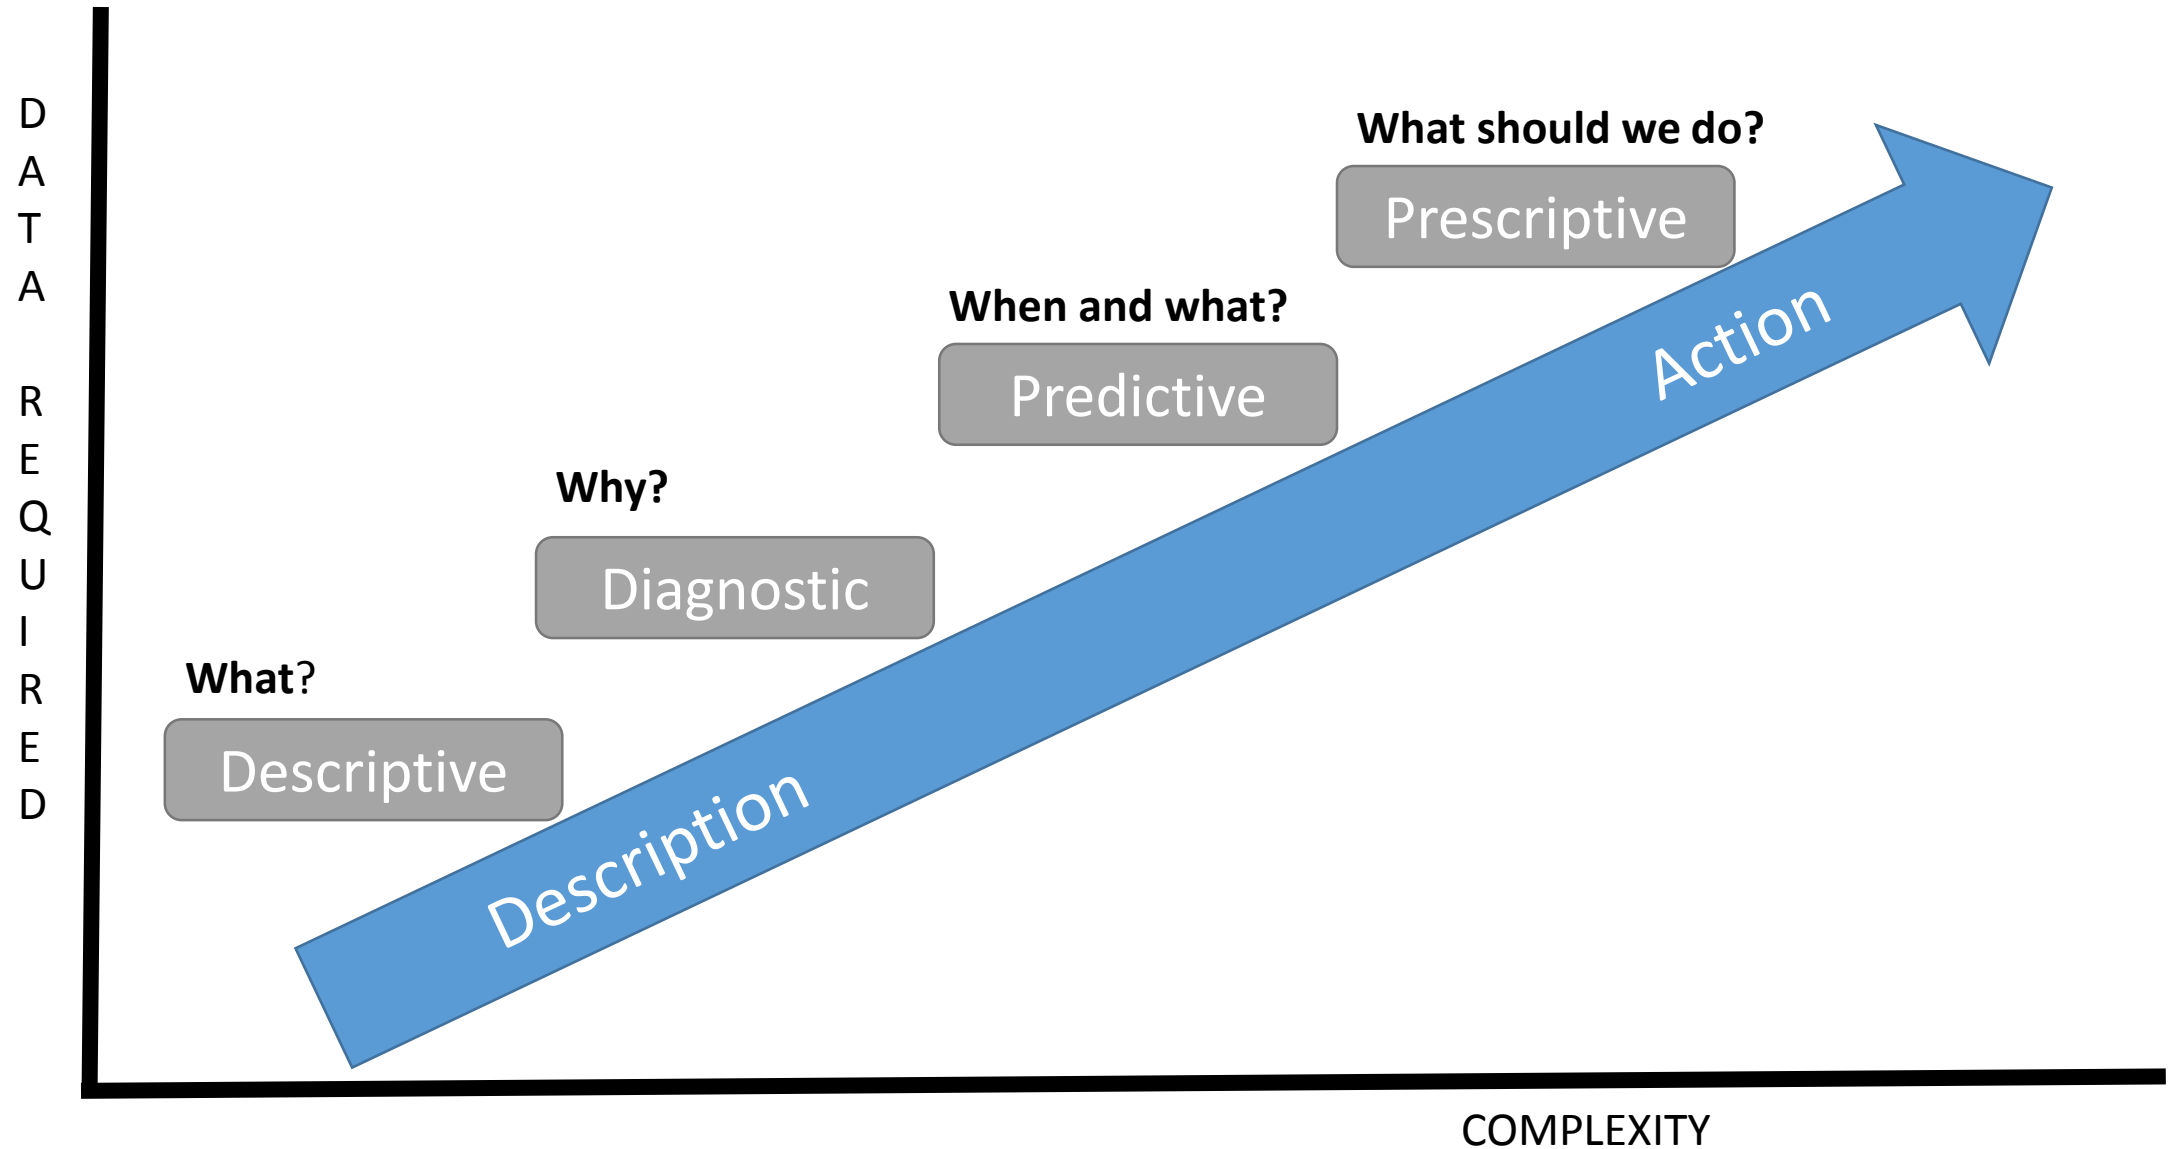

# Data Analytics

Data Mining	Data Analytics
Retrospective	Prospective
Opportunistic	Designed
Cause/Effect free	Causal information
Pattern seeking	Insight seeking

Analytics are 'theory' driven

# Flavours of Analytics

# What's happening with in each approach?

Descriptive Analytics: Counts, averages, %, min/max

Understand what happened in past

Predictive Analytics:  $y=mx + b$

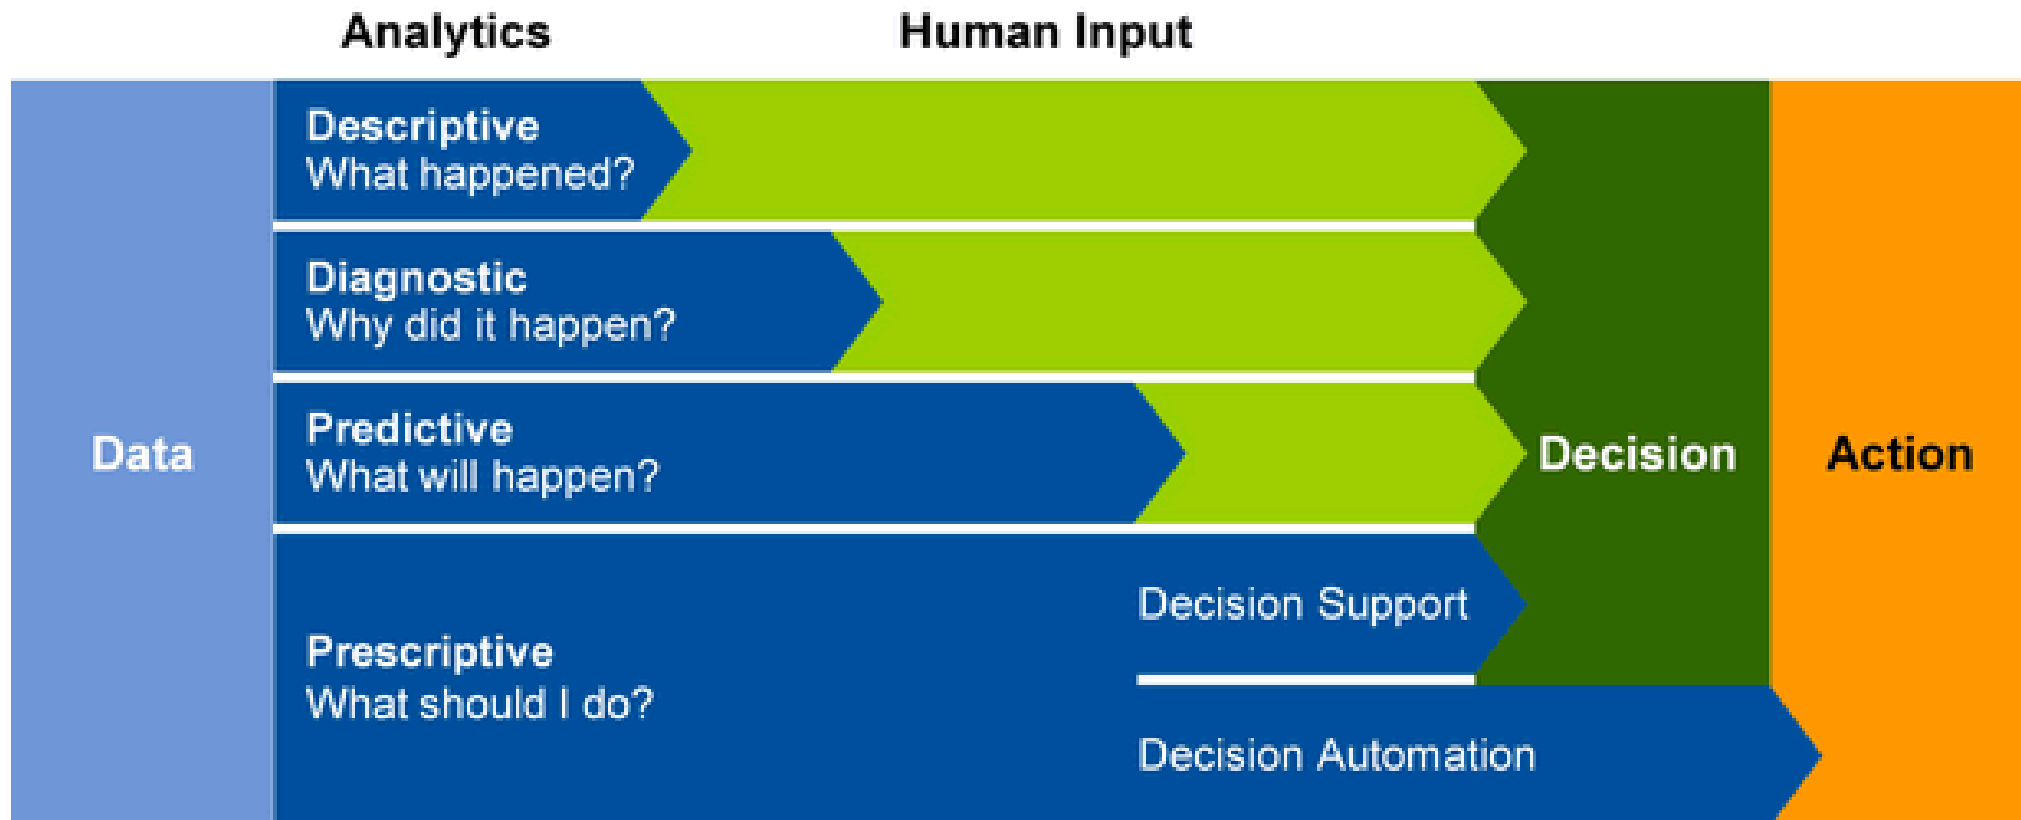

Knowing something sooner

Early warning system

Prescriptive Analytics: IF-THEN-ELSE

Adjustment on the fly

Supports Individualization

# Operational Steps

What is the purpose?

# Examples...

Understand processes within the curriculum

Experiences & outcomes of students

Evaluate elements or the whole intervention

Provide insight on future policy or evaluate policy change

1. What data will you need?

Existing sources? Additional  
sources? New data collection?

# Issues to consider

Data availability

Data quality

Data cleaning

Data security

# Some challenges

Connecting two different datasets

Data stored across databases without common links

Version control – old data won't speak to new data

Data is available but export requires input from the vendor and changes to software

New data on the block?

2. What type of 'analysis' is required? What type of visualization is required?

# Varied levels of complexity

Means and proportions

Associative analyses

Prediction models

Machine-learning and neural networks

This is not as hard as you might  
think...

# Visualization

Does it need to be visualized for your audience?

What's the signal you need to 'see'?

Interactive or static?

## SUMMARY REPORT

Course: 2T0 - 2018-19 • Instructor: N/A • 09/19/2016 • Q

### ASSESSMENT PERFORMANCE

**81%** **47%** **97%**  
Average Score (24.2/30) Low Score (14/30) High Score (29/30)

#### Assessment Score Reliability (KR-20)

Likelihood of students repeating the same performance.

Total Student Performance Histogram

**Assessment Analysis:** Tests with reliabilities below .50 should be used with skepticism.

### LEARNING OUTCOMES *(Category Performance)*

◆ Low ▲ Avg ◆ High

#### 01-Revised Bloom's Taxonomy

No. of Exam Takes of This Cohort: 15

### A. Student Information

Student ID:

[REDACTED]

First Name:

[REDACTED]

Last Name:

[REDACTED]

Email:

[REDACTED]

Cohort:

Year 3

### B. Overall Results

Your overall performance in this progress test is in Zone:

Green

Your score of this progress test is:

53.3%

The class average of this progress test is:

62.9%

**PROGRESS TEST SCORE DISTRIBUTION  
(CLASS 1T8, FEB 2017)**

### 3. Interpretation

# Results vs. Conclusions

Theory

Stakeholders

Expertise

Validation

Activity: Applying to your context

Report back:

1. What are your resources?
2. What are your barriers?
3. What do we need to overcome them?
